

A vibrant blue and yellow macaw parrot is perched on a wooden branch. Its wings are spread wide, showing the intricate details of its feathers. The parrot's body is primarily yellow, with blue feathers on its head, neck, and wings. The background is dark, making the colors of the parrot stand out. The text is overlaid on the bottom left of the image.

**Science nurtures natural curiosity and helps develop a lifelong love of learning by allowing pupils to explore the world around them.**

Through encouraging children to ask and answer their own questions, science creates resilient leaders who can communicate their ideas clearly.

**Sustainable science fosters respect across our community by teaching pupils about the important interaction between human activity and the environment and how we can make a**

opinions of others.

In order to help us serve the wider community, science teaching opens up new ways of thinking which complement and challenge established ideas and knowledge.
